Agronomic Performance

- Growth Habit: Indeterminate
- Plant Type: Erect
- Pubescence: Grey
- Flowers: White
- Pods: Tan
- Plant Height: 91 cm
- Lodging Resistance: Excellent (1.6)
- Disease: Tolerant to phytophthora
- Row Width: 7” to 30”
- Hilum: Yellow
- Oil Index: 20.3%
- Protein Index: 42.6%
- Seed Size: large (2200 seeds/lb.)
- Days to Maturity: 124

Agronomic Performance

- Excellent yield in both wet and dry years
- Adapted to most soil types in Ontario, but particularly adapted to fine textured soils (clay and clay loams)
- Tolerant to phytophthora root rot
- Performs well in both conventional and no-till operations
- The 2-year average from the 2014 Ontario Soybean Variety Trials Report:
  » 105% in the 2900-3300 HU test at the clay sites
  » 99% in the 2900-3300 HU test at the loam sites
  » 103% in the 3300-3500 HU clay test and 101% on loam
- Premiums are available for a white hilum food grade program
- Developed by Agriculture and Agri-Food Canada, Harrow
- SCN tolerance
