

Cycle Organic Fertilizer

Analysis:

- Typical actual analysis: 4-6-1-1S
- CFIA guaranteed minimum analysis: 3-3-1
- Over 65% organic matter content
- 12:1 to 10:1 C:N ratio
- Recent batch analyses available on request
- Pathogen-free

Product notes:

- Cycle Organic Fertilizer is dried anaerobic digestate
- 47 lbs/ft³ bulk density
- ~5% moisture – non-hygroscopic
- Uniform, crumbled pellet format
- Flows through dry fertilizer boxes, can be broadcast; blends well with other products

Uses:

- A good balanced fertilizer for broadcast or banded use
- Economical source of nitrogen and phosphorus
- A very good source of available phosphorus for high-pH, high-calcium soils
- Anaerobic digestates stimulate the growth of beneficial soil fungi

Bringing the Thompsons Revolution to Ontario's Organic Farmers.

JOIN THE **REVOLUTION**

THOMPSONS
ORGANICS

Application rates:

- Apply according to soil test recommendations and crop needs
- Not subject to pre-harvest restrictions for manure under Canadian Organic Standards

Comments:

- Cycle Organic Fertilizer is produced from food scraps and food processing by-products which are first used to generate electricity – helping to close the nutrient loop from field to fork
- StormFisher’s biogas power plant uses over 80,000 mt of food waste each year to produce enough electricity to supply over 3,000 homes; waste heat from the electricity generation is used to dry the digestate into a granular fertilizer
- Cycle Organic Fertilizer is approved for organic use by the Centre for Systems Integration (CSI)
